Tran Quang Khai

FULLSTACK DEVELOPER (REACT / NEXT.JS / NODE.JS)

0389 346 149 dev.khaitran@gmail.com khai-tran-software-engineer.id.vn
github.com/TranQuangKhai288 linkedin.com/in/khai-tran-quang Thu Duc City, Ho Chi Minh City
Remote, open to Australian hours

> Fullstack developer with ~2 years of experience building React, Next.js and TypeScript applications and REST APIs (Node.js/Express, .NET). Built a multi-tenant SaaS on Supabase/PostgreSQL with third-party API integrations and scheduled automation. Uses AI coding tools (Cursor, Copilot, Claude Code) daily and has built shared skill/MCP setups for them.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, Tailwind CSS, shadcn/ui, Ant Design, React Native

Backend: Node.js/Express, Hono, REST APIs, JWT, .NET, FastAPI (limited)

Data: PostgreSQL, Supabase, MongoDB, Redis

DevOps: Docker, Git/GitHub, Cloudflare Workers, Vercel

State and forms: TanStack Query, Zustand, Redux, React Hook Form + Zod

Testing: Vitest, Testing Library, Playwright (AI-assisted)

AI tooling: Cursor, GitHub Copilot, Claude Code, MCP, LLM/RAG integration

PROFESSIONAL EXPERIENCE

Fullstack Developer

06/2025 – Now

Tripdata Vietnam · B2B TravelTech Platform

Travel Booking Portal

Multi-service booking platform (Flights, Hotels) for travel agencies.

React | TypeScript | Tailwind CSS | TanStack Query | Zustand | RESTful API | .NET | Redis | Docker | Vitest

- Built flight and hotel search interfaces with dynamic multi-criteria filters and a multi-step booking wizard with complex passenger validations.
- Built and extended REST APIs using .NET (endpoints, DTOs, validation schemas, error handling); leveraged Redis for caching and session storage; deployed with Docker.
- Integrated React Query and Zustand to cache API responses and cancel obsolete requests, eliminating redundant network calls.
- Refactored legacy UI by migrating from Bootstrap to Tailwind CSS; designed responsive HTML/CSS flight ticket PDF templates for agency issuance.
- Offloaded search, sort, and filter operations on large flight datasets to Web Workers, keeping the main thread free and UI interactions responsive.
- Wrote unit tests with Vitest and Testing Library, collaborating closely with QC during code reviews to cover validation schemas and filtering edge cases.

AI Chatbot & Internal AI Tooling

Flight inquiry AI assistant, multi-tenant AI admin portal, and team-wide agentic dev workflows.

React | TypeScript | .NET | MCP | Claude Code | Cursor | Gemini Flash | GPT-4o

- Co-developed an LLM flight inquiry chatbot (React, TypeScript) integrated with internal .NET services to dynamically trigger flight search and booking APIs in-chat.
- Built a multi-tenant AI admin dashboard (React, TypeScript, REST APIs) to edit and store prompts, manage knowledge data, and configure AI workflows per tenant.
- Evaluated 4 LLMs (Gemini Flash, GPT-4o, GPT-3.5, Grok) on real prompts to compare response accuracy, latency, and cost ahead of tenant rollout.
- Championed AI coding tools across the 16-member team and authored shared skill/MCP libraries for Claude Code and Cursor, boosting team-wide weekly production releases from 2–3 to 5–9 tickets.

PROFESSIONAL EXPERIENCE (CONTINUED)

Software Developer
06/2024 – 12/2024

Tech JDI Vietnam · JDI Group (Singapore)

AI Knowledge Base – Internal AI Chatbot

LLM-powered assistant for internal enterprise knowledge retrieval.

Refine | TypeScript | Node.js | FastAPI | MongoDB | SSE

- Built conversational chat UI consuming SSE for real-time token streaming with resilient loading, error, and retry states for slow responses and transient failures.
- Built Node.js and FastAPI backend services storing text chunks and vector embeddings in MongoDB for RAG retrieval endpoints.

Wealth Advisor – HR Management Platform

Role-based HR platform with hierarchical permission delegation and task assignment.

Refine | TypeScript | Ant Design | RESTful API

- Built role-based admin dashboard with Refine and Ant Design, translating multi-tier permission matrices into an intuitive management interface.
- Optimized rendering performance for large datasets using pagination, lazy loading, and memoization under high data volume.

SELECTED PROJECTS

ZenFlow Spa – SaaS Spa Management Platform
05/2026 – Now

Multi-tenant spa management and booking system featuring real-time operations dashboard.

↗ Live Demo

Next.js 15 | React 19 | TypeScript | Tailwind CSS v4 | Hono | Cloudflare Workers | Supabase | PostgreSQL | Pusher

- Designed a multi-tenant data model on a single shared PostgreSQL database (Supabase) with tenant isolation by spa_id.
- Built serverless API handlers on Cloudflare Workers (Hono) connected to Supabase over HTTP.
- Wrote cron-triggered automation (every 15 minutes) that computes availability and sends SMS reminders through the SpeedSMS API.
- Integrated Pusher for real-time dashboard events, signing requests with the Web Crypto API (HMAC-SHA256).
- Built tenant landing pages and an operations dashboard (Tailwind CSS v4).

Cupid Echo – Dating & Matching Mobile Application
09/2024 – 11/2024

React Native & Node.js mobile app featuring scoring-based matching queue, blind chat rooms, and WebRTC audio/video calls. ↗ *GitHub*

EDUCATION

B.Sc. Software Engineering
2021 – 2026

University of Information Technology — VNU-HCM
